Landslides and Engineered Slopes. The book aims to emphasize the relationship between landslides and other natural hazards. Hence, three of the main sessions focus on Volcanic-induced landslides, Earthquake-induced landslides and Weather-induced landslides respectively, while the fourth main session deals with Human-induced landslides. Some papers presented in a special session devoted to "Subareal and submarine landslide processes and hazard" and in a "Young Session" complete the books. Landslides and Engineered Slopes. Experience is the key to understand the natural phenomena focusing on all the factors that play a major role. This book is my husband's life's work, which is dedicated to the well-being of horses, something I have always supported. We founded the "Friends Association for Classical Dressage Training" in 1977, so that classical equitation the way it was taught at the world-famous Cavalry School of Hannover didn't disappear. In particular, I would like to emphasize his work with poorly trained horses. Thanks to his comprehensive expertise and riding ability, he was always able to correct them and make them into rideable mounts. My husband's tireless energy in the training of horse and rider, as well as his sense of duty to "the cause" he had chosen to serve, were the main contributing factors to the writing of this book, especially after his expert articles "Classical Dressage Training in Practice" had gained nation-wide attention in Germany. This book emphasizes what the general practitioner must do protect his client in a patent matter before referring him to a patent specialist. It discusses the new Court of Appeals for the Federal Circuit and the application of patent law to computer hardware and software. Appendices contain pertinent documents and sample drawings. This book has been written specifically for the students of BCom (Hons) of the University of Delhi in accordance with its prescribed syllabus and that of School of Open Learning. Its basic features are the same as the mother book Cost Accounting—Principles and Practice, which is a UGC recommended text for the last many years. Thus, it gives a thorough grounding in cost concepts, cost behaviour, and costing methods. The subject matter has been organized on 'first things first' basis to sustain the interest of the students. Every discussion involving conceptual difficulties is immediately followed by a numerical example.
