Buku Dasar Sistem Komputer ini disusun dengan maksud agar pembaca dapat memperoleh gambaran umum mengenai perkembangan komputer. Buku Dasar Sistem komputer ini terdiri dari tujuh bab, yaitu bab pertama membahas sejarah dan pengertian komputer, kemudian bab kedua membahas perangkat keras komputer. Bab ketiga membahas tentang BIOS. Bab keempat membahas tentang sistem operasi. Bab kelima membahas tentang perangkat lunak. Bab keenam membahas tentang open source. Bab ketujuh membahas tentang perawatan hardware software dan K3LH. Kelebihan buku ini adalah 1. Materi yang dibahas sudah sesuai dengan kurikulum berbasis Kerangka Kualifikasi Nasional Indonesia (KKNI). 2. Contoh aplikasi sudah sesuai dengan perkembangan aplikasi saat ini. 3. Sudah disertai dengan contoh praktik langsung dalam penggunaan PC maupun Laptop. 4. Dapat digunakan untuk modul praktikum di laboratorium. Buku ini sangat cocok untuk kalangan siswa SMK dan mahasiswa teknik informatika, ilmu komputer pendidikan teknik informatika, dan teknik elektro serta kalangan umum. za?áte?níky. Asus has introduced a single line of ultra-portable computers that could surpass all of Apple's Macintosh sales. Of that total, about 1.6 million units will be equipped not with Windows, but Xandros Linux. The Eee is designed to open up new market segments: In the U.S and other developed nations, it will be targeted largely at school students. Equipped with both "learning" programs as well as office and internet applications, the Eee will provide everything that students need regardless of their grade level. Because it is an ultra-light, highly mobile, yet fully capable computer, it will also appeal to business users and first-time computer buyers. This book will cover everything, from turning the machine on and connecting it to the internet, to how to upgrade, update, and generally get the most from these tiny computers. Distributed robotics is a rapidly growing, interdisciplinary research area lying at the intersection of computer science, communication and control systems, and electrical and mechanical engineering. The goal of the Symposium on Distributed Autonomous Robotic Systems (DARS) is to exchange and stimulate research ideas to realize advanced distributed robotic systems. This volume of proceedings includes 43 original contributions presented at the Tenth International Symposium on Distributed Autonomous Robotic Systems (DARS 2010), which was held in November 2010 at the École Polytechnique Fédérale de Lausanne (EPFL), Switzerland. The selected papers in this volume are authored by leading researchers from Asia, Europe, and the Americas, thereby providing a broad coverage and perspective of the state-of-the-art technologies, algorithms, system architectures, and applications in distributed robotic systems. The book is organized into four parts, each representing one critical and long-term research thrust in the multi-robot community: distributed sensing (Part I); localization, navigation, and formations (Part II); coordination algorithms and formal methods (Part III); modularity, distributed manipulation, and platforms (Part IV). Maximum PC is the magazine that every computer fanatic, PC gamer or content creator must read. Each and every issue is packed with punishing product reviews, insightful and innovative how-to stories and the illuminating technical articles that enthusiasts crave. Information modeling and knowledge bases have become essential subjects in the last three decades, not only in academic communities related to information systems and computer science, but also in the areas of business where information technology is applied. This book presents the proceedings of the 28th International Conference on Information Modelling and Knowledge Bases (EJC2018), held in Riga, Latvia from 4–8 June 2018. The aim of the conference was to bring together experts with a common interest in the understanding and solving of problems on information modelling and knowledge bases, as well as those from different areas of computer science and other disciplines who apply the results of research to practice. The 39 accepted papers collected here cover a variety of topics, including: conceptual modeling; knowledge and information modeling and discovery; linguistic modeling; cross-cultural communication and social computing; multimedia data modeling and systems; and environmental modeling and engineering. The book will be of interest to researchers and practitioners alike, and to anyone
