A limiting factor to a broader adoption of AI technology is the inherent risks that come with giving up human control and oversight to "intelligent" machines. For sensitive tasks involving critical infrastructures and affecting human well-being or health, it is crucial to limit the possibility of improper, non-robust and unsafe decisions and actions. Before deploying an AI system, we see a strong need to validate its behavior, and thus establish guarantees that it will continue to perform as expected when deployed in a real-world environment. In pursuit of that objective, ways for humans to verify the agreement between the AI decision structure and their own ground-truth knowledge have been explored. Explainable AI (XAI) has developed as a subfield of AI, focused on exposing complex AI models to humans in a systematic and interpretable manner. The 22 chapters included in this book provide a timely snapshot of algorithms, theory, and applications of interpretable and explainable AI and AI techniques that have been proposed recently reflecting the current discourse in this field and providing directions of future development. The Indian Ocean Rim Association for Regional Cooperation was formally established in 1997 under the leadership of South Africa, India and Australia. The demise of Apartheid, the fall of the Soviet empire, and the rapid advance of globalization altered the geopolitics of the Indian Ocean region in the early 1990s and served as a catalyst in the creation of the IOR. This book contextualizes the founding of the IOR by outlining the historical aspects of economic ties across the Indian Ocean and previous attempts to promote regional cooperation. The contributors to this volume analyse the post-colonial ideological legacy, the political and economic constraints caused

by Apartheid and communism, the end of protectionism and the problem of globalization. These major themes in the history of the IOR are applied to what the future holds for Southern Africa within this economic grouping, and whether or not regional cooperation will manage to compete with globalization. This volume will be of interest to scholars of development studies, international relations, Third World studies, and regional development. Presents current statistical data on economic activity.
