This book introduces the key stages of niche-based habitat suitability model building, evaluation and prediction required for understanding and predicting future patterns of species and biodiversity. Beginning with the main theory behind ecological niches and species distributions, the book proceeds through all major steps of model building, from conceptualization and model training to model evaluation and spatio-temporal predictions. Extensive examples using R support graduate students and researchers in quantifying ecological niches and predicting species distributions with their own data, and help to address key environmental and conservation problems. Reflecting this highly active field of research, the book incorporates the latest developments from informatics and statistics, as well as using data from remote sources such as satellite imagery. A website at www.unil.ch/hsdm contains the codes and supporting material required to run the examples and teach courses. "No one who loves elephants or how humans interact with wildlife should pass up Jacob Shell's remarkable book." —Dan Flores, author of *Coyote America* *Giants of the Monsoon Forest* journeys deep into the mountainous rainforests of Burma and India to explore the world of teak logging elephants and their intriguing alliance with humans. Jacob Shell's narrative vividly depicts elephants' extraordinary intelligence, and the complicated bond with individual human riders, a partnership that can last for decades. *Giants of the Monsoon Forest* reveals an

unexpected relationship between evolution in the natural world and political struggles in the human one, while considering how Asia's secret forest culture might offer a way to help protect the fragile spaces both elephants and humans need to survive. View the animal kingdom up close as never before in this breathtaking title, which has already sold over 1.5 million copies. Written by 70 specialists, it features stunning wildlife photography of more than 2000 of the world's most important wild mammals, birds, reptiles, amphibians, and insects. With around two million species identified to date, animals are the dominant and most varied form of life on the planet. Animal presents a representative selection, ranging from the giant baleen whale, to fast-moving predators such as sharks, big cats, and birds of prey, as well as microscopic beetles barely 1mm long and other insects. It presents some of the latest species to be described: meet the cute but elusive olinguito from South America, which was only identified in 2013, or the skywalker hoolock gibbon that was named after a Star Wars character in 2017. Animal also explains how the earth's biodiversity is in sharp decline and the conservation projects underway to safeguard precious species. For each one, it gives a locator map and statistics, including its conservation status. For anyone who wants a reliable and enthralling reference, in which you can find the answers to everything - from why zebras are striped or how the sunbear got its name - Animal is your essential one-stop guide. Provides lessons, stories, and activities to teach students about soil formation, soil science, and soil conservation.

A classic resource for teachers is now back in an updated edition! Using an inductive and experimental approach, Animal Coloration aims to increase students' awareness of the ways wild organisms are adapted to their environments. Even though the activities suggest a specific teaching procedure, each activity is also intended to be an investigation by the students and an opportunity for them to make and test hypotheses based on their observations. Through these activities, students will begin to appreciate how scientific knowledge and understanding were attained. Each of the activities provides an opportunity to incorporate US National Science Education Content Standards, including science and inquiry, life science, and history and nature of science. Also new to this revision is a table summarizing each activity with learning outcomes and relevant content standards. Originally published in 1966 by the Regents of the University of California, Animal

Coloration is the result of over five years of field-testing and experimentation by the Elementary School Science Project at UC Berkeley. This book was difficult to find for far too long, so NSTA Press is especially proud to bring the book to a new generation of teachers and to update the work for its long-time admirers.
