***Selling the American Muscle Car Jan 26 2020 As the muscle car wars developed in the early 1960s, auto manufacturers scrambled to find catchy marketing campaigns to entice the buying public into their dealerships. General Motors, Ford, and Chrysler, with all their divisions, as well as AMC and Studebaker, inevitably sank billions of dollars into one-upmanship in an effort to vie for the consumer's last dollar. Automotive writer Diego Rosenberg examines the tactics and components used by manufacturers in waging war against one another in the muscle car era. Manufacturers poured millions into racing programs, operating under the principle of "Win on Sunday, Sell on Monday." Cars were given catchy nicknames, such as The GTO Judge, Plymouth Roadrunner, Cobra, and Dodge Super Bee. Entire***

**manufacturer lines were given catchy marketing campaigns, such as Dodge's Scat Pack, AMC's Go Package, and Ford's Total Performance. From racing to commercials to print ads, from dealer showrooms to national auto shows, each manufacturer had its own approach in vying for the buyer's attention, and gimmicks and tactics ranged from comical to dead serious. Selling the American Muscle Car: Marketing Detroit Iron in the 60s and 70s takes you back to an era when options were plentiful and performance was cheap. You will relive or be introduced to some of the cleverest marketing campaigns created during a time when America was changing every day.**

**From Steam to Screen Jan 06 2021 In late**

***nineteenth and early twentieth century Britain, there was widespread fascination with the technological transformations wrought by modernity. Films, newspapers and literature told astonishing stories about technology, such as locomotives breaking speed records and moving images seemingly springing into life onscreen. And, whether in films about train travel, or in newspaper articles about movie theatres on trains, stories about the convergence of the railway and cinema were especially prominent. Together, the two technologies radically transformed how people interacted with the world around them, and became crucial to how British media reflected the nation's modernity and changing role within the empire. Rebecca Harrison draws on archival sources and an extensive corpus of films to trace the intertwined histories of the train and the screen for the first time. In doing so, she presents a new and illuminating material and cultural history of the period, and demonstrates the myriad ways railways and cinema coalesced to transform the population's everyday life. With examples taken from more than 240 newsreels and 40 feature-length films, From Steam to Screen is essential reading for students and***

**Eisler's Encyclopedia of Environmentally Hazardous Priority Chemicals May 22 2022**

**Thousands of inorganic and organic chemicals and their metabolites enter the biosphere daily as a direct result of human activities. Many of these chemicals have serious consequences on sensitive species of natural resources, crops, livestock, and public health. The most hazardous of these were identified by a panel of environmental specialists from the U.S. Fish and Wildlife Service; these chemicals are the focus of this encyclopedia. For each priority group of chemicals, information is presented on sources, uses, physical and chemical properties, tissue concentrations in field collections and their significance, lethal and sublethal effects under controlled conditions. This includes effects on survival, growth, reproduction, metabolism, carcinogenicity, teratogenicity, and mutagenicity - and proposed regulatory criteria for the protection of sensitive natural resources, crops, livestock, and human health. Taxonomic groups of natural resources covered include terrestrial and aquatic plants and invertebrates, fishes, amphibians, reptiles, birds, and mammals. \* The**

**only product that centers on the most hazardous environmental chemicals to sensitive natural resources \* The only single volume compendium on the subject, allowing ease in consulting \* Written by a noted national and international authority on chemical risk assessment to living organisms**

**The Summary Report Oct 15 2021 The Global 2000 Report to the President of the U.S.: Entering the 21st Century, Volume I: The Summary Report focuses on the Global 2000 Study, particularly noting the issues on the environment, population, and natural resources. The book first offers information on the findings and conclusions of the study and environment projections. Topics include water, energy, and forestry projections and the environment; climate changes and the environment; and gross national product (GNP) projections and the environment. The manuscript then examines the "Government's Global Model," including the analysis of the foundation, interpretation of projections, and strengthening the foundation. The text examines the elements of the ""Government's Global Model."" These include population, GNP, climate, technology, food, fisheries, forestry, water, energy, and fuel**

***minerals. The book also surveys some of the studies and task forces whose findings might be helpful to those trying to provide methods and instructions in support of decision-making for international efforts in population, resources, and the environment. The manuscript will surely serve readers interested in the study of international efforts on population, resources, and the environment.***

***Mercury Hazards to Living Organisms Jul 24***

***2022 Complex and ever changing in its forms and functions, the element mercury follows a convoluted course through the environment and up the food chain. The process is complicated further by the fact that the difference between tolerable natural background levels and harmful effects in the environment is exceptionally small and still not completely understood. Written by recognized national and international authority on chemical risk assessment, Ronald Eisler, Mercury Hazards to Living Organisms explores the biological, physical, and chemical properties of mercury and its compounds. Rich in facts and information, the book provides a fundamental look at the issues. A synthesis of current scientific reviews, the book documents the significance of mercury concentrations in abiotic materials, plants, invertebrates, amphibians, reptiles, elasmobranch, fishes, and birds, as well as humans and other mammals. The author reviews historical and current uses and sources of mercury along with its physical, chemical, biological, and biochemical properties. He summarizes mercury transport and speciation processes and analytical techniques for mercury***

**The Global 2000 Report to the President of the U.S. Sep 14 2021 The Global 2000 Report to the President of the U.S. presents an interagency report of the 70-year record of Government concern relating to issues in population, resources, and environment. It discusses the interrelatedness of these three factors. It addresses all three topics from a relatively long-term, global perspective and emphasizes interconnections and feedback Some of the topics covered in the book are the projections of the population, climate, technology, and the food and agriculture. The analysis of these projections is covered. The tools used in the analysis are discussed. The text defines the meaning of mesarovic-pestel world model, carrying capacity, stability, diversity, and ecological buffering. A comparison of the resulting projections is presented. A chapter of the volume is devoted to the embassy reports on**

**forestry and agricultural trends. Another section of the book focuses on the Latin American world model. The book will provide useful information to economists, political analysts, students and researchers.**
