This volume, the first of two dealing with the Early Iron Age deposits from the Athenian Agora, publishes the tombs from the end of the Bronze Age through the transition from the Middle Geometric to Late Geometric period. An introduction deals with the layout of the four cemeteries of the period, the topographical ramifications, periodization, and a synthesis of Athens in the Early Iron Age. Individual chapters offer a complete catalogue of the tombs and their contents, a full analysis of the burial customs and funerary rites, and analyses of the pottery and other small finds. Maria A. Liston presents the human skeletal material, Deborah Ruscillo presents the faunal remains, and Sara Strack contributes to the pottery typology and catalogue. In an appendix, Eirini Dimitriadou provides an overview of the locations of burial activity in the wider city. Having this book in your pocket is just like having a real marque expert by your side. This book contains the edited versions of the papers presented at the Second International Workshop on Electric and Magnetic Fields held at the Katholieke Universiteit van Leuven (Belgium) in May 1994. This Workshop deals with numerical solutions of electromagnetic problems in real life applications. The topics include coupled problems (thermal, mechanical, electric circuits), CAD & CAM applications, 3D eddy current and high frequency problems, optimisation and application oriented numerical problems. This workshop was organised jointly by the AIM (Association of Engineers graduated from de Montefiore Electrical Institute) together with the Departments of Electrical Engineering of the Katholieke Universiteit van Leuven (Prof. R. Belmans), the University of Gent (Prof. J. Melkebbek) and the University of Liege (Prof. W. Legros). These laboratories are working together in the framework of the Pole d'Attraction Interuniversitaire - Inter-University Attractie-Pole 51 - on electromagnetic systems led by the University of Liege and the research work they perform covers most of the topics of the Workshop. One of the principal aims of this Workshop was to provide a bridge between the electromagnetic device designers, mainly industrialists, and the electromagnetic field computation developers. Therefore, this book contains a continuous spectrum of papers from application of electromagnetic models in industrial design to presentation of new theoretical developments.
