Women and Violence in the Late Medieval Mediterranean, ca. 1100-1500 Jan 27 2020 This pioneering work explores the theme of women and violence in the late medieval Mediterranean, bringing together medievalists of different specialties and methodologies to offer readers an updated outline of how different disciplines can contribute to the study of gender-based violence in medieval times. Building on the contributions of the social sciences, and in particular feminist criminology, the book analyses the rich theme of women and violence in its full spectrum, including both violence committed against women and violence perpetrated by women themselves, in order to show how medieval assumptions postulated a tight connection between the two. Violent crime, verbal offences, war and peace-making are among the themes approached by the book, which assesses to what extent coexisting elaborations on the relationship between femininity and violence in the Mediterranean were conflicting or collaborating. Geographical regions explored include Western Europe, Byzantium, and the Islamic world. This multidisciplinary book will appeal to scholars and students of history, literature, gender studies, and legal studies.

Braided Relations, Entwined Lives Feb 08 2021 "[A] stunning, deeply researched, and gracefully written social history." -- Leslie Schwalm, University of Iowa This study of women in antebellum Charleston, South Carolina, looks at the roles of women in an urban slave society. Cynthia M. Kennedy takes up issues of gender, race, condition (slave or free), and class and examines the ways each contributed to conveying and replicating power. She analyses what it meant to be a woman in a world where historically specific social classifications determined personal destiny and where at the same time people of color and white people mingled daily. Kennedy's study examines the lives of the women of Charleston and the variety of their attempts to negotiate the web of social relations that ensnared them.

A practical treatise of the law of vendors and purchasers of Estates Aug 22 2019

The Millstone Quarries of Powell County, Kentucky Oct 04 2020 In the early nineteenth century, mills were ubiquitous, making possible dozens of indispensable items—from the bread served at every meal to the boards used to construct houses and other buildings. Because millstones went through so much daily wear and tear, only certain types of rock formations were suitable for millstone quarries, though they were often difficult to locate and access. This book provides an archaeological and historical study of six millstone quarries in Powell County, Kentucky. While the best-known conglomerate millstone quarries were in New York, Virginia, and Pennsylvania, Powell County was an important millstone producer for Kentucky, and the quarries there are well-preserved and documented. It features dozens of photographs and tables, two maps, and seven appendices.

[The Earthmover Encyclopedia](#) Oct 28 2022 "This colossal reference book documents the timeless urge to reshape the world, and the machines used to do so from the 1088's to today.

From utility tractors and loaders up to the largest diggers and bulldozers, every piece of heavy equipment is listed here by model and manufacturer, making this the most exhaustive book on the world's most hard-working vehicles and machines"-- Publisher's description.

Lecture Notes in Algebraic Topology Jul 01 2020 The amount of algebraic topology a graduate student specializing in topology must learn can be intimidating. Moreover, by their second year of graduate studies, students must make the transition from understanding simple proofs line-by-line to understanding the overall structure of proofs of difficult theorems. To help students make this transition, the material in this book is presented in an increasingly sophisticated manner. It is intended to bridge the gap between algebraic and geometric topology, both by providing the algebraic tools that a geometric topologist needs and by concentrating on those areas of algebraic topology that are geometrically motivated. Prerequisites for using this book include basic set-theoretic topology, the definition of CW-complexes, some knowledge of the fundamental group/covering space theory, and the construction of singular homology. Most of this material is briefly reviewed at the beginning of the book. The topics discussed by the authors include typical material for first- and second-year graduate courses. The core of the exposition consists of chapters on homotopy groups and on spectral sequences. There is also material that would interest students of geometric topology (homology with local coefficients and obstruction theory) and algebraic topology (spectra and generalized homology), as well as preparation for more advanced topics such as algebraic K -theory and the s -cobordism theorem. A unique feature of the book is the inclusion, at the end of each chapter, of several projects that require students to present proofs of substantial theorems and to write notes accompanying their explanations.

Working on these projects allows students to grapple with the "big picture", teaches them how to give mathematical lectures, and prepares them for participating in research seminars. The book is designed as a textbook for graduate students studying algebraic and geometric topology and homotopy theory. It will also be useful for students from other fields such as differential geometry, algebraic geometry, and homological algebra. The exposition in the text is clear; special cases are presented over complex general statements.

Yearbook Dec 26 2019 Supplements accompany some numbers; annual supplement issued 1944-46 during suspension of main publication.

Limestone in New Brunswick Oct 24 2019 After describing the general characteristics of limestone and the regional geology of New Brunswick, this report details the occurrences of limestone deposits in the province. Where available, information for each deposit includes location and access, geology, limestone properties, and economic considerations. The report also includes a history of limestone production in New Brunswick. Appendices include chemical analyses of limestone samples from various locations in the province, analyses and logs of drill cores, and a list of fossil forms found in the limestone occurrences discussed in the report.

Geographies, Mobilities, and Rhythms over the Life-Course Jan 19

2022 By thinking in terms of the geographies of mobilities, we are better able to understand the central importance of movements, rhythms and shifting emplacements over the life-course. This innovative book represents research from a new and flourishing multidisciplinary field that includes, among other things, studies on smart cities, infrastructures and networks; mobile technologies for automated highways or locative media; mobility justice and rights to stay or enter or reside. These activities, cadences and changing attachments to place have profound effects—first upon how we conduct or govern ourselves and each other via many social institutions, and second upon how we constitute the spaces in and through which our lives are experienced. This scholarship also has clear connections to numerous aspects of social and spatial policy and planning.
