Since the beginning of the Royal Navy Submarine Service in 1901, 173 submarines have been lost and in many circumstances with their entire crew. War inevitably takes a heavy toll: in World War Two alone – 341 officer and 2,801 ratings failed to return to harbour. The loss of personnel was roughly equivalent to the strength of the Submarine Arm at the outbreak of war. Between the first loss, A1 in 1904, and the last, Artemis in 1971, lie many stories in which cool nerve was very much in evidence and one can marvel at the escape of the only survivor of Perseus; and of the sinking of Olympus from which the few survivors had to swim seven miles before receiving help; and of Surgeon-Lieutenant Charles Rhodes who died that others may live. These and many other accounts of submarine escape are described within this history – and whenever possible in the words of survivors or witnesses. Teaching Mathematics is nothing less than a mathematical manifesto. Arising in response to a limited National Curriculum, and engaged with secondary schooling for those aged 11 ? 14 (Key Stage 3) in particular, this handbook for teachers will help them broaden and enrich their students' mathematical education. It avoids specifying how to teach, and focuses instead on the central principles and concepts that need to be borne in mind by all teachers and textbook authors—but which are little appreciated in the UK at present.This study is aimed at anyone who would like to think more deeply about the discipline of 'elementary mathematics', in England and Wales and anywhere else. By analysing and supplementing the current curriculum, Teaching Mathematics provides food for thought for all those involved in school mathematics, whether as aspiring teachers or as experienced professionals. It challenges us all to reflect upon what it is that makes secondary school mathematics educationally, culturally, and socially important.
