An Assessment of the Privatization of Child Welfare Services
Sep 22 2019 Many government bodies and policymakers
have embraced privatization of child welfare services, while
others question whether privatization is truly more cost
effective or provides the best services. An Assessment of the
Privatization of Child Welfare reports on six states' efforts to
privatize their child welfare systems and their varying levels
of success. This research documents the rich experiences of
a variety of communities that have moved to private service

delivery and will help child welfare practitioners everywhere understand what privatization can -- and cannot -- do to help them help children. Book jacket.

The Contract Professional's Playbook: The Definitive Guide to Maximizing Value Through Mastery of Performance- and Outcome-Based Contracting Mar 21 2022 The Contract Professional's Playbook provides guidance, principles, tools and best practices for developing best in class performance- and outcome-based contracts. Leveraging our vast personal experience, we provide contract professionals with first-hand, practical know-how that answers your most pressing how to questions.

Contracting for Public Services Jan 19 2022 A new book published by the World Bank's Private Sector Advisory Services outlines an innovative approach to delivering development assistance for public basic services such as potable water, safe sanitation, modern energy, and primary education and healthcare. Called output-based aid, the approach delegates service delivery to the non-profit or for profit private sector under contracts that tie payments to the outputs or results actually delivered to target beneficiaries. The book gathers cases of innovative, output-based approaches from across the infrastructure and social sectors, and also provides a checklist for designing and implementing output-based schemes. (From the World Bank website)

Performance-Based Contracting May 23 2022 Book Review: Performance-Based Contracting Step by Step Process to Achieve - Checklists Toolkit Best Practices Multi-million and billion-dollar government contracts are increasingly being awarded as a result of performance-based statements of work developed by government acquisition teams. In the past, a federal agency would issue a statement of work setting out the work to be done, minimum requirements, performance dates and so on. Today, more and more federal agencies are requesting performance work statements (PWS) which turns the procedure around. Simply defined, performance-based contracting allows government to acquire services via contracts that define what is to be achieved, not necessarily how it is done. Contractors are required to develop the statement of work using performance metrics, measuring tools and a quality assurance plan. It enables contractors to follow an innovative development approach and allows the agency to evaluate each proposal for performance benefits before the contract is awarded. Writing a Performance-Based Statement of Work is not easy. Focusing on the product to be purchased and outcomes and not the process requires discipline and guidance. This book, Performance Based Contracting, is an invaluable guide in understanding this process and helping government put in place more effective, efficient acquisitions and industry to secure major federal contracts. The book shows you how to write a successful performance-based statement of work with lots of case studies and examples. Chapters lead you through all the steps necessary from planning and market research to writing the performance-based statement of work and

everything in between. The book highlights the key elements of performance-based acquisition which encourage innovative business practices and emphasizes that performance-based acquisition requires the participation of all stakeholders the users, the acquisition workforce and industry to ensure the requirement is adequately satisfied. The book also stresses that it is vital that all stakeholders understand the importance of their role in the process which is comprehensive and must include the user, and many different functional team members including financial managers, legal advisors, program (project) managers, contracting officers, contracting specialists and so on. It is essential that industry be a key participant, especially, but not only, when the requirements are complex. This is a "must read" book for anyone and everyone involved in the federal contracting whether they are seeking to win contracts or are responsible for awarding and managing them. The authors have researched extensively through federal sources to bring the reader the most comprehensive desk reference available on all aspects of the performance-based contracting. This book has drawn heavily on the authoritative materials published by the a wide range of federal agencies including the Government Accountability Office (GAO), the General Services Administration (GSA), the Federal Emergency Management Agency (FEMA), the Department of Homeland Security (DHS), and Headquarters, Department of the Army. Then, the authors have organized the information into an organized and logical presentation, added their own experience and a high value step-by-step process to provide a valuable resource to contract veterans

and newcomers alike. The easy to follow step-by-step process explains the duties and responsibilities of all parties in the acquisition process, key skill areas required and how these are applied throughout the contracting life cycle. Finally, the authors provide a wealth of forms, report formats, checklists checklists and more checklists that guide all key individuals through the performance-based process. Throughout this handbook, there are case studies, checklists, exercises and structured "if-then" guides designed to prepare contract writers and evaluators for the tasks in hand, give them a powerful set of management tools, motivate them to succeed and inspire them to adopt best practices in order to achieve even more positive performance outcomes.

Performance-based Contracting for Health Services in Developing Countries Dec 30 2022

Despite the existence of effective interventions, there are many developing countries which are not on track to achieve the Millennium Development Goals (MDGs) for health. In many countries the delivery of health services is inadequate and one way of improving the situation is to contract with non-state providers. Contracting is a mechanism for a financing entity to procure a defined set of services from a non-state provider. Performance-based contracting is a type of contracting with: (a) a clear set of objectives and indicators; (b) systematic efforts to collect data to judge contractor performance; and (c) some consequences for the contractor,

either rewards or sanctions, based on performance. Effective contracting for health services can be facilitated by using a systematic approach, described in this toolkit, that addresses key issues, including how to: 1. have a constructive dialogue with all stakeholders; 2. define the health services in terms of what services are to be delivered, where, the quantity of beneficiaries to be served, equity, and quality of care; 3. design the monitoring and evaluation to judge the performance of contractors; 4. select the contractors in a fair and transparent way; 5. arrange for effective contract management; 6. draft the contract and bidding documents; and 7. carry out the bidding process and successfully manage the contracts. The toolkit also includes a review of 14 evaluated examples of contracting in developing countries which concludes that the current weight of evidence indicates that contracting improves the coverage and quality of services rapidly. The six cases with controlled, before and after evaluations demonstrated large impact with the median double difference (follow-up minus baseline in the experimental group minus follow-up minus baseline in the control) ranging from 9 to 26 percentage points.

Performance-based Contracting in Manufacturing Industries Dec 18 2021

Bio-based Materials and Biotechnologies for Eco-efficient Construction Sep 15 2021 Bio-based Materials and Biotechnologies for Eco-efficient Construction fills a gap

in the published literature, discussing bio-based materials and biotechnologies that are crucial for a more sustainable construction industry. With comprehensive coverage and contributions from leading experts in the field, the book includes sections on Bio-based materials and biotechnologies for infrastructure applications, Bio-based materials and biotechnologies for building energy efficiency, and other applications, such as using biotechnology to reduce indoor air pollution, for water treatment, and in soil decontamination. The book will be an essential reference resource for academic researchers, civil engineers, contractors working in construction works, postgraduate students and other professionals. Focuses on sustainability and green concepts in construction Discusses recent trends on bio-based materials and biotechnologies for eco-efficient construction Covers many important aspects, including infrastructure applications, energy efficiency for building construction, and air, water and soil related problems

Labor-based Grading Contracts Feb 08 2021 Asao B. Inoue argues for the use of labor-based grading contracts along with compassionate practices to determine course grades as a way to do social justice work with students.

Performance-Based Contracts (PBC) for Improving Utilities Efficiency Sep 27 2022 Scientific and Technical Report No. 24 Performance-Based Contracts (PBC) for Improving Utilities Efficiency: Experiences and Perspectives is a compendium of articles written by members of the PBC taskforce. It focuses on new approaches without delegated management to private operator i.e. service contracts, consulting contracts, Alliance approach, public-public partnership. It also mentions new design and generation of more traditional PPPs, (MC, lease, concession), where a larger proportion of performance-based design is being applied. List of Contents: Performance Based Contracts – Setting the scene; PBC and Results Based Financing: the inverse approach; PBC and Energy Efficiency; Internal Performance Contracts: A Case of the National Water and Sewerage Corporation in Uganda; Performance-Based Service Contracts in Navi Mumbai; Financial Comparison of PBCs and Conventional Approach; Tegucigalpa PBC Case Study; Performance Based Contracts – Key Design Issues; NRW Reduction Optimization Framework; How to improve water services performance? Performance Based Contracts (PBC)

and Regulatory issues; Peer-to-Peer Partnerships Operational for sustainable water services; Performance Based Contracts in Malawi: Teamwork Works; Performance based affermage contracts; Performance based Contracts, The Aroona Integrated Alliance Experience; Experience from Eastern Europe; NRW Performance Contract - Kingdom of Bahrain; The way forward and perspectives/trends

The Hidden Inequities in Labor-Based Contract Grading Feb 20 2022 Current Arguments in Composition Series The Hidden Inequities in Labor-Based Contract Grading intervenes in the increasingly popular practice of labor-based grading by expanding the scope of this assessment practice to include students who are disabled and multiply marginalized. Through the lens of disability studies, the book critiques the assumption that labor is a neutral measure by which to assess students and explores how labor-based grading contracts put certain groups of students at a disadvantage. Ellen C. Carillo offers engagement-based grading contracts as an alternative that would provide a more equitable assessment model for students of color, those with disabilities, and students who are multiply marginalized. This short book explores the history of labor-based grading contracts, reviews the scholarship on this assessment tool, highlights the ways in which it normalizes labor as an unbiased tool, and demonstrates how to extend the conversation in new and generative ways both in research and in classrooms. Carillo encourages instructors to reflect on their assessment practices by demonstrating how even assessment methods that are designed through a social-justice lens may unintentionally privilege some students over

others.

A Risk-based Methodology for Estimating Contractors' Liability in Superfund Cleanup Construction Nov 24 2019

DNA-Based Molecular Construction Dec 06 2020 The Workshop combined different fields of molecular nanotechnology applying DNA either as subject of studies or as a molecular building block. As the first meeting solely focusing on DNA-nanotechnology, the heterogeneous scientific background of the participants in physics, chemistry, and biology provided a comprehensive account of the state-of-the-art in this multidisciplinary field and previewed the trends for further research in this promising field.

Location-Based Management for Construction Aug 14 2021 With extensive case studies for illustration, this is a practitioner's guide to an entirely new production system for construction management using flowline scheduling. Covering the entire process of presenting a comprehensive management system - from design, through measurement, scheduling, and visualization and control - its emphasis is on reducing cost and increasing quality. Drawing its components together into a management system, the authors not only include theory and explanations of how and why it works, but also examine and present a suite of methods for successful project implementation. Perfect as a how-to guide for researchers and advanced construction students to discover

the simple application of the new techniques, and invaluable for acquiring the practical tools for planning and controlling projects.

Consent, Stealthing and Desire-Based Contracting in the Criminal Law Oct 28 2022 Consent, Stealthing and Desire-Based Contracting in the Criminal Law examines the inconsistencies in the definitions of consent in sexual encounters by examining emerging sex crimes alongside changing community values and the changing legal definitions of consent in sexual offending, focusing on common law and civil law countries. This book distinguishes itself through the use of empirically validated research strategies and an in-depth analysis of current legislative regimes. It argues that desire and pleasure are largely ignored by legal consent definitions, despite its importance in sexuality more broadly. Using two case studies of emerging forms of sexual offending, the criminalisation of sadomasochistic sexual practices and the offence of 'stealthing', it examines how the law is both a blunt and under-utilised instrument in the policing of people's sexual relationships. The presence or absence of consent can change a lawful sexual act between two people into a serious crime with potentially devastating consequences to both survivor and offender. Yet there remains no consistent definition of consent applied within and between legal jurisdictions across the world. A comparative analysis reveals parallels between common law countries and civil law countries. The book also provides a brief history of the use of term consent in relation to sexual offending and examines definitional and sociological requirements of conceptual

consent across history. Covering jurisdictions in the US, UK, and Australia, providing an innovative resource on issues relating to consent presented in an accessible way, this book will appeal to students and researchers of criminal justice, criminal law, criminology, sociology and gender studies.

Nanotechnology in Cement-Based Construction Nov 17 2021 Many books on new smart materials are available, but specialized analysis of particular topics is still in high demand. This multiauthor book focuses on applying nanotechnology to cement-based materials to make numerous engineering applications possible. The addition of novel smart nanofillers allows the development of multifunctional composite materials, not just limited to improving mechanical strength, but also including several enhanced features. Special attention is devoted to types of nano-inclusions, novel techniques to mix components, and analysis of properties that can be achieved by paste, mortar, or concrete if added with nanofillers. Among these properties, the capability of self-sensing is very promising. Moreover, the use of phase-changing materials improves the energy efficiency of nanocomposites, resulting in important applications in engineering. Particular attention is also focused on energy harvesting and electromagnetic shielding properties. Comprehensive and up to date, this is an important reference book that not only provides in-depth information about recent developments and perspectives in this field but also discusses topics that promise major developments in the near future.

A Knowledge-Based Prototyping Environment for Construction of Scientific Modeling Software May 31 2020

Performance Based Contracting and Improving the Current Contracting Process Oct 04 2020 The primary objective of the research described in this report was to suggest improvements to the maintenance contracting process currently utilized by the South Carolina Department of Transportation (SCDOT). A secondary research objective was to examine to what extent SCDOT could migrate more toward performance based, as opposed to method based, highway maintenance specifications.

Performance-Based Contracts for Road Projects Aug 26 2022 This book focuses on the aspects of contracting contracts, basically related to road construction and management contracts. The book presents an analytical study of Performance-Based Road Management and Maintenance (PMMR), Funktionsbauvertrag (FBV) (Function-Based Construction Contract) and Public Private Partnerships (PPP). A separate chapter is also included about the comparative study of these contract types. The book provides useful material for university libraries, construction companies and government departments of construction.
