A Reader in Botany Jun 08 2021 Excerpt from A Reader in Botany: Part II, Flower and Fruit, Selected and Adapted From Well-Known Authors In 1793, at Berlin, was published a book entitled, "Nature's Secret in the Structure and Fertilization of Flowers Unveiled." It is a charming old book with a dainty, flowery title-page, sprinkled with fluttering insects (Fig. 2), as unlike a grave scientific work of the eighteenth century as can well be imagined. A celebrated German professor says that as a child he used to amuse himself with the plates, regarding the book in the light of a fairy tale. Such it was for a long time held to be, though now we know it was the first discovery of a real secret of Nature. Let us hear how the author of the book, Christian Conrad Sprengel, came to make his discovery. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Lessons in Flower and Fruit, Modelling in Wax Dec 14 2021 Lessons in Flower and Fruit, Modelling in Wax by John H. Mintorn, first published in 1870. The conviction that a more practicable and explanatory guide to modelling flowers and fruit in wax than any hitherto obtainable would be acceptable to my pupils and others who practice this interesting branch of the Plastic Arts, and the feeling that I could supply the want, have prompted me to publish the following " Lessons." I have as much as possible avoided the use of technical terms, so that the reader may better understand and more easily practice what I attempt to teach. Careful attention to my " Course of Lessons " and study of the various diagrams accompanying many of them, will, I think, enable any who have a taste for such imitative arts to model with truthfulness and pleasure, and to produce such lifelike portraits of their garden favorites as must be alike interesting and pleasing.
