To Mr. Tate Howard, You are quite possibly the most infuriating,

annoying and grumpy man I've ever met in my life. I know you think that you're God's gift to women, but I have a secret to let you in on: you're not. You're God's gift to yourself. Get over your wanna-be cool surfer self and grow up. I thought it was time that someone addressed your big head and told you straight to your face that you're not all that. Just because you have an Ivy league education doesn't mean you're the smartest man in the world. In fact, I'm not even sure if you would have gotten in if you didn't have rich parents. Yes, I went there. Every woman doesn't want to sleep with you and I'm sure you're not even good in bed. And I'm someone that would know. From, Your Secret Not Admirer Most of the genetic information in the world today comes from lesser developed countries, and is considered freely available to anyone because it is contained in natural organisms; when large multinational corporations take that free information and alter it, say to improve crop yield, that information is intellectual property protected behind barriers established by the developed home countries of the corporations, and so inaccessible to developing countries. Biotechnology, like the disastrous Green Revolution before it, reduces genetic diversity and makes crops vulnerable to sudden and devastating destruction by pests or changes in physical conditions. These and other issues associated with biotechnology in Latin America are discussed in nine studies, which also consider the political and economic relations among governments, companies, and academic research centers. This book unites research in philosophy and cognitive science with cultural history to re-examine memory in early modern religious practices. Georgia Waltz has things many people only dream of: a plush Manhattan apartment overlooking Central Park, a Hamptons beach house, valuable jewels and art, two bright daughters, and a husband she adores, even after decades of marriage. It's only when Ben suddenly drops dead from a massive coronary while training for the New York City Marathon that Georgia discovers her husband—a successful lawyer—has left them nearly penniless. Their wonderland was built on lies. As the family attorney scours emptied bank accounts, Georgia must not only look for a way to support her family, she needs to face the revelation that Ben was not the perfect husband he appeared to be, just as her daughters—now ensconced back at home with secrets of their own—have to accept that they may not be returning to their lives in Paris and at Stanford subsidized by the Bank of Mom and Dad. As she uncovers hidden resilience, Georgia's sudden midlife shift forces her to consider who she is and what she truly values. That Georgia may also find new love in the land of Spanx and stretch marks surprises everyone—most of all, her.

This new edition of *TUFS Studies in Linguistics*, we aim to showcase the various linguistics research conducted at Tokyo University of Foreign Studies. In this first volume, we report on the international symposium hosted by the Global Center of Excellence Program "Corpus-based Linguistics and Language Education (CbLLE)" throughout 2008. This history of one of the most contentious educational issues in America

examines bilingual instruction in the United States from the common school era to the recent federal involvement in the 1960s and 1970s. Drawing from school reports, student narratives, legal resources, policy documents, and other primary sources, the work teases out the underlying agendas and patterns in bilingual schooling during much of America's history. The study demonstrates clearly how the broader context - the cultural, intellectual, religious, demographic, economic, and political forces - shaped the contours of dual-language instruction in America between the 1840s and 1960s. Ramsey's work fills a crucial void in the educational literature and addresses not only historians, linguists, and bilingual scholars, but also policymakers and practitioners in the field.

Metro A New York Times bestseller Grace Sachs, a happily married therapist with a young son, thinks she knows everything about women, men and marriage. But how well does Grace know her own husband? She is about to find out, and in the place of what she thought she knew, there will be a violent death, a missing husband, and a chain of terrible revelations. Left behind in the wake of a very public disaster, and horrified by the ways in which she has failed to heed her own advice, Grace must dismantle one life and create another for herself and her child. Published previously under the title *You Should Have Known*

Concepts from *Tensor Analysis and Differential Geometry* discusses coordinate manifolds, scalars, vectors, and tensors. The book explains some interesting formal properties of a skew-symmetric tensor and the curl of a vector in a coordinate manifold of three dimensions. It also explains Riemann spaces, affinely connected spaces, normal coordinates, and the general theory of extension. The book explores differential invariants, transformation groups, Euclidean metric space,

and the Frenet formulae. The text describes curves in space, surfaces in space, mixed surfaces, space tensors, including the formulae of Gauss and Weingarten. It presents the equations of two scalars K and Q which can be defined over a regular surface S in a three dimensional Riemannian space R . In the equation, the scalar K , which is an intrinsic differential invariant of the surface S , is known as the total or Gaussian curvature and the scalar U is the mean curvature of the surface. The book also tackles families of parallel surfaces, developable surfaces, asymptotic lines, and orthogonal envelopes. The text is intended for a one-semester course for graduate students of pure mathematics, of applied mathematics covering subjects such as the theory of relativity, fluid mechanics, elasticity, and plasticity theory.

How should teacher librarians or instructional leaders engage in action research to improve their school library and benefit students' learning? This book provides the answers. Teacher librarians need to get directly involved with the research process in the learning commons in order to create actions and strategies that will enhance student learning—and benefit their own professional development as well as demonstrate accountability through their action research efforts. This book provides practical tips and work spaces for educators at the local, state, and national levels, clearly modeling and explaining the process and the tools for conducting action research in a school library setting that will identify the program's strengths and weaknesses. The author coalesces current expert opinions on the topic of action research in the school library environment and highlighting what other teacher librarians in the field have identified as the pros and cons of using the process. Readers are directed to focus on mitigating the "cons" through the use of specific working pages and templates and by initially exploring "five favorite" links, thereby encouraging those who are new to action research to try what might otherwise seem a daunting process. School principals K-12

who read this book will be better equipped to support their teacher librarians and teachers in this important professional process. Supplies invaluable insights from experts and practitioners on the subject of action research Provides a clear model of the process in action Directs readers to additional resources that facilitate effective action research and timely topics for school library research, such as time management and technology in learning Spanning more than two centuries in Ireland, Castle on the Rise unites the legacy of three women who must risk mending their broken places for life, love, and the belief that even through the depths of our pain, a masterpiece of a story can emerge. Our societies obviously rest on common beliefs. These "myths" are tools that help us to develop and build common identities; they form the structure around which societies function. This does not imply that these beliefs are "true," in the sense that they would be supported by empirical facts. In social matters, myths have undoubtedly important functions to play even if no empirical facts support them. On the other hand, and precisely because they are not discussed, myths may be problematic: they may create illusions, conserve structures that are inefficient and unable to improve the situation of citizens. This is particularly true with constitutions. Constitutions are very important for societies: a constitution is a document — even in societies based on "unwritten" constitutions — which binds citizens together, creating unity among them, and which forms the framework within which our activities take place. As Nobel Prize laureate James Buchanan used to say: constitutions contain the rules of the social game we play in our everyday life. However, constitutions are not frequently debated by citizens. This is why we end up with common beliefs about these constitutions: they are above our heads, around us. We take them, their role, function, and nature as given. The purpose of this volume to investigate and challenge common constitutional myths. Featuring contributions from prominent economists, political scientists, and legal scholars, the chapters in this volume address such myths as "constitutions are binding social contracts," "constitutions are economic documents" and "constitutions

are legal documents." Illustrating their analyses with historical and contemporary examples from the United States, Canada, and Europe, the authors build a multi-layered approach to understanding constitutions and their implications for social and political influence. The local constabulary wastes no time reaching out to Scotland Yard, which sends its best man: the easygoing detective-inspector Littlejohn.
