The American Joint Committee on Cancer's Cancer Staging Manual is used by physicians throughout the world to diagnose cancer and determine the extent to which cancer has progressed. All of the TNM staging information included in this Sixth Edition is uniform between the AJCC (American Joint Committee on Cancer) and the UICC (International Union Against Cancer). In addition to the information found in the Handbook, the Manual provides standardized data forms for each anatomic site, which can be utilized as permanent patient records, enabling clinicians and cancer research scientists to maintain consistency in evaluating the efficacy of diagnosis and treatment. The CD-ROM packaged with each Manual contains printable copies of each of the book's 45 Staging Forms. This book addresses the most relevant aspects of radiation oncology in terms of technical integrity, dose parameters, machine and software specifications, as well as regulatory requirements. Radiation oncology is a unique field that combines physics and biology. As a result, it has not only a clinical aspect, but also a physics aspect and biology aspect, all three of which are inter-related and critical to optimal radiation treatment planning. In addition, radiation oncology involves a host of machines/software. One needs to have a firm command of these machines and their specifications to deliver comprehensive treatment. However, this information is not readily available, which poses serious challenges for students learning the planning aspect of radiation therapy. In response, this book compiles these relevant aspects in a single source. Radiation oncology is a dynamic field, and is continuously evolving. However, tracking down the latest findings is both difficult and time-consuming. Consequently, the book also comprehensively covers the most important trials. Offering an essential ready reference work, it represents a value asset for all radiation oncology practitioners, trainees and students. "Healing With Words: A Writer's Cancer Journey" is a compassionate and wry self-help memoir written by an award-winning prolific author, nurse and poet, who at the age of forty-seven found her life shattered first by a DCIS (early breast cancer) diagnosis and five years later by another, seemingly unrelated and incurable cancer--multiple myeloma. The book includes the author's experiences, reflections, poetry and journal entries, in addition to writing prompts for readers to express their own personal story. Raab's journals have provided a safe haven and platform to validate and express her feelings. Raab views journaling to be like a daily vitamin--in that it heals, detoxifies and is essential for optimal health. Readers will learn to: Understand the importance of early cancer detection and how to take control of their own health Discover the power of writing to release bottled-up emotions Learn how the process of journaling can facilitate healing See how a cancer diagnosis can be a riveting event which can renew and change a person in a unique way Praise for Raab's "Healing With Words" "One woman's story, beautifully told and inspiring to those for whom journaling will ease a cancer diagnosis." --Barbara Delinsky, author UPLIFT: Secrets from the Sisterhood of Breast Cancer Survivors "Time after time, Diana articulates incisively the thoughts and feelings that convey hoped-for meaning and encouragement. She is a woman who knows what it is to live fully in the face of mortality. She will add value to the life of every person who reads this book. Healing With Words resonates at a spiritual level for me." --Sena Jeter Naslund, author of Ahab's Wife and Abundance: A Novel of Marie Antoinette Author's

The children of the cancer support group Kids Alive! have been where you are now. They've felt the anger, the fear, and the guilt that cancer causes. In Kids' Words When a Parent Has Cancer, they share their experiences with you. In these pages, you'll find the answers you need to cope with a family member's cancer diagnosis. The kids, ages six to seventeen, talk about when they discovered their parent had cancer and what life is like during treatment. They share their feelings and how they expressed their pain. Most important, their words can help you discover what you can do to help yourself—and your family—cope during and after cancer treatment. Illustrated with artwork from the Kids Alive! program, Kids' Words When a Parent Has Cancer also offers advice to parents on what children need to know about cancer and how to handle any potential difficulties. The true voice of the book, however, belongs to the kids, who want other children to know that they understand what they're going through and are not alone—others have been here before and want to help. Cancer care today often provides state-of-the-science biomedical treatment, but fails to address the psychological and social (psychosocial) problems associated with the illness. This failure can compromise the effectiveness of health care and thereby adversely affect the health of cancer patients. Psychological and social problems created or exacerbated by cancer—including depression and other emotional problems; lack of information or skills needed to manage the illness; lack of transportation or other resources; and disruptions in work, school, and family life—cause additional suffering, weaken adherence to prescribed treatments, and threaten patients' return to health. Today, it is not possible to deliver high-quality cancer care without using existing approaches, tools, and resources to address patients' psychosocial health needs. All patients with cancer and their families should expect and receive cancer care that ensures the provision of appropriate psychosocial health services. Cancer Care for the Whole Patient recommends actions that oncology providers, health policy makers, educators, health insurers, health planners, researchers and research sponsors, and consumer advocates should undertake to ensure that this standard is met. This volume presents a detailed survey of imaging, multidetector-row computed tomography, various methodologies related to diagnosis, helical computed tomography, therapy, and prognosis of liver cancer, ultrasonography, and power Doppler ultrasound—including colorectal liver metastases and sound, for the prognosis and assessment of biliary tract carcinomas, while the already liver cancer treatment (including HCC) and published Volumes 1, 2, 3, and 4 detail liver metastases from colorectal cancer are similar aspects of breast, lung, prostate, discussed in detail, as is the use of radiofrequency ablation in hepatic tumors. respectively. 'The story of oncology is not only fascinating but also contains many accounts of dead ends, chance discoveries, illusions, mistakes and disappointments alongside the few successes.' These words are taken from the introduction to this book. The author, professor emeritus of Medical Oncology, reviews all aspects of the problem of cancer from a historical perspective, from the oldest existing records to the latest scientific and medical advances. It will interest the many people engaged in the treatment of cancer to read how the current therapeutic methods came about, and the book may also provide inspiration for cancer researchers, and for all those directly or indirectly involved with cancer. The layman looking for background information on a particular treatment may find it useful too. The various

chapters can be read independently. A glossary and a few explanatory diagrams augment the text. This book grew out of an invitation the author received to lecture on the history of oncology. During his background reading, he discovered that there was no single volume dealing with the entire history of the subject. Fortunately, however, a great deal of information could be found here and there in the literature. As he read, he was struck by the fascinating stories behind many discoveries, and felt impelled to put them together in a single comprehensive account. The results of his labors are presented in this remarkable volume. The author, Prof. D.J.Th. (Theo) Wagener, was head of the department of Medical Oncology at the Radboud University Nijmegen Medical Centre in the Netherlands from 1982 to 2001, chairman of the Educational Committee of the European Society of Medical Oncology (ESMO), a member of the Educational Committee of the American Society of Clinical Oncology (ASCO) and a member of various international scientific working groups, mainly of the European Organization for Research and Treatment of Cancer (EORTC). The breast cancer guide every woman needs for herself, her best friend, and her sister—a warm, practical, relatable handbook, that dispels the terror, taking you step-by-step through the process, from diagnosis to post-treatment. When Andrea Hutton was diagnosed with breast cancer, she wanted to know everything. She voraciously read books, articles, and websites and talked to everyone she knew. But nothing prepared her for what the surgery, chemotherapy, and radiation would feel like. Were there tricks that could ease her pain and discomfort? What was "fatigue" and how would it affect her? At what exact moment would her hair fall out and how? Hutton wanted what she could not find: a clear how-to guide for the cancer girl she had become. Bald Is Better with Earrings is Hutton's answer for women diagnosed with breast cancer: a straightforward handbook, leavened with humor and inspiration, to shepherd them through the experience. Warm and down-to-earth, Hutton explains what to expect and walks you through this intense and emotional process: tests, surgery, chemo, losing your hair and shaving your head, being bald, radiation treatments. Hutton offers a wealth of invaluable advice—from tricks for surviving chemo, to treating your skin during radiation, to keeping track of meds—and includes a practical list of tips for each stage of the process at the end of every chapter. Compassionate, friendly, and shaped by Hutton's first-hand knowledge, Bald Is Better with Earrings is the comprehensive, essential companion for anyone dealing with breast cancer. This edition of ICD-O, the standard tool for coding diagnoses of neoplasms in tumour and cancer registrars and in pathology laboratories, has been developed by a working party convened by the International Agency for Research on Cancer / WHO. ICD-O is a dual classification with coding systems for both topography and morphology. The book has five main sections. The first provides general instructions for using the coding systems and gives rules for their implementation in tumour registries and pathology laboratories. Section two includes the numerical list of topography codes, which remain unchanged from the previous edition. The numerical list of morphology codes is presented in the next section, which introduces several new terms and includes considerable revisions of the non-Hodgkin lymphoma and leukaemia sections, based on the WHO Classification of Hematopoietic and Lymphoid Diseases. The five-digit morphology codes allow identification of a tumour or cell type by histology, behaviour, and grade. Revisions in the morphology section were made in consultation with a large number of experts and were finalised after field-testing in cancer registries around the world. The alphabetical index gives codes for both topography and morphology and includes selected tumour-like lesions and conditions. A guide to differences in morphology codes between the second and third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms that changed morphology code, terms for conditions now considered malignant, deleted terms, and terms that changed behaviour code. Palliative care provides comprehensive support for severely affected patients with any life-limiting or life-threatening diagnosis. To do this effectively, it requires a disease-specific approach as the patients' needs and clinical context will vary depending on the underlying diagnosis. Experts in the field of palliative care and oncology describe in detail the needs of patients with advanced cancer in comparison to those with non-cancer disease and also identify the requirements of patients with different cancer entities. Basic principles of symptom control are explained, with careful attention to therapy for pain associated with either the cancer or its treatment and to symptom-guided antineoplastic therapy. Complex therapeutic strategies for palliative cancer patients are highlighted that involve both cancer- and

symptom-directed options and address a range of therapeutic aims. Issues relating to drug use in palliative cancer care are fully explored, and a separate section is devoted to care in the final phase. A range of organizational and policy issues are also discussed, and the book concludes by considering likely future developments in palliative care for cancer patients. Palliative Care in Oncology will be of particular interest to palliative care physicians who are interested in broadening the scope of their disease-specific knowledge, as well as to oncologists who wish to learn more about modern palliative care concepts relevant to their day-to-day work with cancer patients. Carrying on the tradition established by its founding editor, the late Dr. Martin Abeloff, the 4th Edition of this respected reference synthesizes all of the latest oncology knowledge in one practical, clinically focused, easy-to-use volume. It incorporates basic science, pathology, diagnosis, management, outcomes, rehabilitation, and prevention - all in one convenient resource - equipping you to overcome your toughest clinical challenges. What's more, you can access the complete contents of this Expert Consult title online, and tap into its unparalleled guidance wherever and whenever you need it most! Equips you to select the most appropriate tests and imaging studies for diagnosing and staging each type of cancer, and manage your patients most effectively using all of the latest techniques and approaches. Explores all of the latest scientific discoveries' implications for cancer diagnosis and management. Employs a multidisciplinary approach - with contributions from pathologists, radiation oncologists, medical oncologists, and surgical oncologists - for well-rounded perspectives on the problems you face. Offers a user-friendly layout with a consistent chapter format • summary boxes • a full-color design • and more than 1,445 illustrations (1,200 in full color), to make reference easy and efficient. Offers access to the book's complete contents online - fully searchable - from anyplace with an Internet connection. Presents discussions on cutting-edge new topics including nanotechnology, functional imaging, signal transduction inhibitors, hormone modulators, complications of transplantation, and much more. Includes an expanded color art program that highlights key points, illustrates relevant science and clinical problems, and enhances your understanding of complex concepts. 100 Inspirational Stories and Beautiful, Uplifting Photos of Survivors. "You have cancer" are three of the most terrifying words a person can hear, and our culture does little to ease the fear. New Beginnings: 100 Cancer Survivors follows one hundred survivors who discovered that those words were the start of a new beginning, not an end to their lives. New Beginnings is a collection of narratives and energetic photographic portraits of men, women, children, and families that inspire and provide hope for anyone diagnosed with cancer as well as for their families and friends. The survivors vary in age, ethnicity, and diagnosis, but they all share the ability to turn a diagnosis of cancer into a positive force in their lives. Coming from all walks of life, survivors include Sally Craigen, who beat two different cancers three decades apart but who never let it stop her from enjoying life; Rabbi William Cutter, who had already survived three heart attacks by the time he faced down prostate cancer on two occasions; Sophia Colby, diagnosed with hemophagocytic lymphohistiocytosis at fifteen months of age, who has survived more in her ten years than many people do in their entire lives; and professional basketball player Coby Karl, who hasn't let two bouts from thyroid cancer stop him from chasing his dreams; and ninety-six others. This is a project by and for cancer survivors: their words, Bill Aron's photographs, in collaboration with their ideas and sensibilities. This is their book. The book provides science-based information about herbal remedies, other dietary supplements, and non-mainstream products promoted as cancer treatments for the medical community. Each herb or remedy description is accompanied by information as to its origin, most common uses, benefits, and risks/dangers. The book will provide detailed information on over 250 remedies and describes their constituents, mechanisms of action, adverse reactions, pharmacokinetics, and contraindications. Information on each herb or other remedy was developed through careful and critical reviews of research conducted by experts in pharmacy, botanicals, and complementary therapies. Each herb or product is described in terms of the following sections: common name, scientific name, key words, clinical summary, herbal constituents, warnings, mechanisms of action, usage, adverse reactions, drug interactions, dosage, literature summary and critique, and notes. This book has the look and feel of a fine field guide to medicinal plants, thanks to the beautiful drawings by Angela Donato, and it will be of interest to a wide audience beyond the medical specialists, including cancer patients. This resource contains up-to-date terminology in oncology-related topics, including chemotherapy, radiation oncology,

surgical therapy, molecular cell biology, gynaecologic oncology, tumours and anti-cancer drug names. The number of terms has increased significantly since the last edition, and the appendices feature updated illustrations, drugs by indication and sample reports. In addition, the chemotherapy protocols and cancer classifications have been updated. Entries are fully cross-referenced for quick access, and the extensive A-Z list provides variant spellings and phrasings for many terms. Patient Surveillance After Cancer Treatment covers the history of cancer patient surveillance after curative-intent treatment, the rationale, the methodologies used in the past and at present, the methodologies that will probably emerge in the future, the costs of surveillance, the definitions of various terms used in the field, and how those who are interested in the topic can get more information about it from the internet. The secondary focus of the book is to publicize the need for well-designed, adequately powered randomized clinical trials comparing two (or more) surveillance strategies for each type of cancer. The audience includes all oncologists, cancer researchers, medical economists and policy makers in government and insurance companies, and finally, interested patients. This book is part of the Current Clinical Oncology series, which provides cutting-edge knowledge of cancer diagnosis, management, and treatment. World renowned experts share their insights in all the major fields of clinical oncology. From the fundamentals of pathophysiology to the latest developments in experimental and novel therapies, Current Clinical Oncology is an indispensable resource for today's practicing oncologist. From the foundations of cancer to issues of survivorship, this book provides all the details and information needed to gain a true understanding of the 'basics' of cancer. When Someone You Love Has Advanced Cancer is a booklet for friends and family members taking care of a person with advanced cancer. This booklet covers making new decisions about care, how to discuss issues and changes with the health care team, getting support and asking for help, life planning and advance directives, talking with family and friends, talking with children and teens about advanced cancer, communicating with your loved one who has cancer, and tips on caring for both your physical and emotional self. In addition to a wide range of oncology words, the book includes key terminology related to hematology, HIV and AIDS, and chemotherapy. This edition contains a new appendix on drug abbreviations and names and fully updated appendices including anatomical illustrations; sample reports; common terms by procedure; lab values; chemotherapy drug treatment; clinical trials; cancer classification/grading/staging systems; drugs by indication; and National Cancer Institute Comprehensive Care Centers. In Enduring Cancer Dwaipayan Banerjee explores the efforts of Delhi's urban poor to create a livable life with cancer as patients and families negotiate an overextended health system unequipped to respond to the disease. Owing to long wait times, most urban poor cancer patients do not receive a diagnosis until it is too late to treat the disease effectively. Drawing on ethnographic fieldwork in the city's largest cancer care NGO and at

India's premier public health hospital, Banerjee describes how, for these patients, a cancer diagnosis is often the latest and most serious in a long series of infrastructural failures. In the wake of these failures, Banerjee tracks how the disease then distributes itself across networks of social relations, testing these networks for strength and vulnerability. Banerjee demonstrates how living with and alongside cancer is to be newly awakened to the fragility of social ties, some already made brittle by past histories, and others that are retested for their capacity to support. Fully updated, the Oxford Handbook of Nutrition and Dietetics, second edition is a practical quick-reference guide to nutrition in the prevention and treatment of disease and the maintenance of good health. "Dealing with serious illness and the threat of death is a part of the human experience, and more than other prevalent illnesses, cancer conjures up fears of suffering, helpless debilitation, and death. This text is a vivid memoir of the author's own cancer diagnosis and treatment. Harriet Wadson, a pioneer in the art therapy profession and author of seven other books on art therapy, here shows us her own response to the challenge of cancer. In addition to the written journal, she created an 'altered book' of over 70 images throughout her cancer treatment. They are described in the text and reproduced in full color on an accompanying CD-ROM."--From back cover. An important addition to the literature of cancer by an award-winning scholar and memoirist. Elaborating upon her "Living with Cancer" column in the New York Times, Susan Gubar helps patients, caregivers, and the specialists who seek to serve them. In a book both enlightening and practical, she describes how the activities of reading and writing can right some of cancer's wrongs. To stimulate the writing process, she proposes specific exercises, prompts, and models. In discussions of the diary of Fanny Burney, the stories of Leo Tolstoy and Alice Munro, numerous memoirs, novels, paintings, photographs, and blogs, Gubar shows how readers can learn from art that deepens our comprehension of what it means to live or die with the disease. From a writer whose own memoir, *Memoir of a Debulked Woman: Enduring Ovarian Cancer*, was described by the New York Times Book Review as "moving and instructive...and incredibly brave," this volume opens a path to healing. Holland-Frei Cancer Medicine, Ninth Edition, offers a balanced view of the most current knowledge of cancer science and clinical oncology practice. This all-new edition is the consummate reference source for medical oncologists, radiation oncologists, internists, surgical oncologists, and others who treat cancer patients. A translational perspective throughout, integrating cancer biology with cancer management providing an in depth understanding of the disease An emphasis on multidisciplinary, research-driven patient care to improve outcomes and optimal use of all appropriate therapies Cutting-edge coverage of personalized cancer care, including molecular diagnostics and therapeutics Concise, readable, clinically relevant text with algorithms, guidelines and insight into the use of both conventional and novel drugs Includes free access to the Wiley Digital Edition providing search across the book, the full reference list with web links, illustrations and photographs, and post-publication updates This text is a concise handbook designed to assist the clinician in the implementation of Accelerated Partial Breast Irradiation (APBI). It includes a review of the principles that underlie APBI, a practical and detailed description of each technique for APBI, a review of current clinical results of APBI, and a review of the incidence and management of treatment related complications. The book encompasses a number of different techniques and approaches that include brachytherapy, intraoperative, and external beam techniques. There is currently no single source that describes these techniques and their clinical implementation. A guide to recent insights into the genetic and epigenetic parameters of cancer biology and pathology and emerging clinical applications The thoroughly updated second edition of *The Biology and Treatment of Cancer*, now titled *Cancer: Prevention, Early Detection, Treatment and Recovery*, goes beyond reviewing the fundamental properties of cancer biology and the relevant issues associated with treatment of the disease. The new edition contains coverage of additional "patient centric" topics and presents cancer biology with selection of topics, facts, and perspectives written in easy-to-understand terms. With contributions from noted experts, the book explores recent advances in the understanding of cancer including breakthroughs in the molecular and cellular basis of cancer and provides strategies for approaching cancer prevention, early detection, and treatment. The authors incorporate recent information on the genetic and epigenetic parameters of cancer biology and pathology with indications of emerging clinical applications. The text offers a unique guide to cancer prevention, early detection, treatment, and recovery for students, caregivers, and most importantly cancer patients. This

significant book: Incorporates current insight into the genetic and epigenetic parameters of cancer biology and pathology and information on emerging clinical applications Contains contributions from leaders in cancer research, care, and clinical trials Offers an accessible guide to an accurate and balanced understanding of cancer and the cancer patient Focuses on the importance of cancer prevention, early detection, treatment, and survivorship Written for medical students, students of cancer biology, and caregivers and cancer patients, *Cancer: Prevention, Early Detection, Treatment and Recovery* offers an authoritative overview of the challenges and opportunities associated with cancer biology, cancer research, and the spectrum of clinical considerations. Improved cancer treatment and survival rates have resulted in a growing number of cancer survivors who live years, and even decades, after their cancer diagnosis. Insights into what the experience of cancer survivorship looks like and how it can be navigated are much sought after by cancer survivors and their families, loved ones, and communities as they chart this unfamiliar and often lonely territory. Approximately 53% of cancer patients are diagnosed when 65 years or older, yet no attempt to explore the experience of older cancer survivors has been made. Dr. Alice Kornblith, an esteemed social psychologist with extensive experience working with cancer patients, aims to address this need in *Older Survivors of Cancer: Feeling Understood by Sharing Experiences*. This thoughtful, respectful book seeks to reduce older cancer patients' and survivors' feeling of aloneness and of not being understood by sharing narratives of other older cancer survivors' experiences. Narratives were gathered specifically for this book and relate experiences across different cancer diagnostic groups, phases of cancer and gender. Throughout, the reader learns how cancer affected their lives-physically, psychologically, spiritually, and socially--during each phase of their cancer journey. Commentary by Dr. Kornblith provides context and lessons learned from the narratives. This book is about cancer. It's also about life. Two separate entities battling it out for our bodies and taking up residence in our world. You don't have to have cancer to read this book and you certainly don't have to know anyone who is currently fighting it. You simply have to be curious, keep an open mind, and be ready to have a bunch of my knowledge dropped on you. This book has been specifically designed from the perspective of a 20-something who ended up in the cancer club at 24 years old. A couple of years later, this book is finally completed and hopefully getting into the hands of people who need it. Aren't you tired of reading boring cancer books that just make you depressed? I know I was! So I decided to write this book. I hope it will make you laugh until you cry and give you enough hope to get through another day. You're not alone and I'd love to share my adventures with you. Happy reading! -J.L. Barker

The Fifth Edition of Stedman's Radiology Words has over 110,000 words and terms (over 2,400 more terms than the previous edition), including accurate and current terminology related to procedures, techniques, drugs, and tests, as well as abbreviations, jargon, and variants. Coverage includes key terms related to CT, MRI, PET and SPECT imaging, mammography, ultrasonography, x-ray, neuroradiology, and radiographics. This edition contains new appendices on common breast imaging terms and common radiographic imaging techniques and fully updated appendices including anatomical illustrations; contrast media, imaging agents, and related substances; common radiation oncology terms; sample reports and dictation; and common terms by procedure. "I'm standing at the reception desk of the breast clinic on Christmas Eve. Oddly, I'd not really had much head space to even think about the joys of Christmas with the biggest lump known to man festering away inside my boob." On Christmas Eve 2015, Vicki Culverhouse's life shuddered to a halt when, completely out of the blue, she was diagnosed with breast cancer. A business owner and single mum to two teenage boys, she didn't have time for chemotherapy, surgery, radiotherapy, and the hundred and one alien things that come with a cancer diagnosis. With an unfaltering sense of positivity and dark humour, this book charts Vicki's journey from her first appointment at the breast clinic to the final stages of her recovery. It's a journey that takes no prisoners. Between the friendship reshuffles, head shaving and chemo brain, she's forced to ask herself some crucial questions. Is a group email an acceptable way to tell people you have cancer? Will it ever be socially acceptable to talk about bowel movements? Does cancer really turn you into the most boring person in the world? A personal look at how even the scariest situations can turn out to be a blessing in disguise. Warning: This book contains strong language and is intended for mature readers. Cancer. There are few words in the English language having such a visceral, personal impact. Cancer patient. Cancer survivor.

Pretty much anyone over the age of 30 knows one. A family member. A friend. Someone lost too soon. Someone forever changed. But we don't really like to talk about it, because there's really not much we can do. We fight cancer, sure, but we rarely win. Defeating cancer is one of medical science's greatest challenges. So when a novel approach to treatment seems promising, there is an intense interest in its progress and those who are making it. This book is about both - the progress and the pioneers - and its focus is the revolutionary science of something called cancer immunotherapy. This medical marvel, cancer immunotherapy - also called immuno-oncology - is still in its infancy. Yet, mobilizing the immune system to recognize and attack cancer has long been imagined, and occasionally attempted, for more than 100 years: It is only just recently that significant - in fact, unprecedented - progress has been made. With the use of newly approved immunotherapy treatments, there are now reports of hundreds, if not thousands of cancer patients with advanced disease living years beyond all prior expectation. Some of these once-terminally ill patients are now called "cured." This has never happened before. As Dr. Jill O'Donnell-Tormey comments in the Foreword, "It has taken decades of basic research and billions of dollars of investment to build the foundation upon which today's lifesaving treatments are based. This book offers a uniquely entertaining yet inspiring glimpse into the lives and minds of the academic and industry pioneers who forged this new field. It is a story of how an obscure and oft-derided field of cancer research - and the tenacious few scientists who refused to abandon it - came from behind to become the new 'darling of oncology.'" The book's author, Neil Canavan, is an experienced commentator on new developments in medical science. His portraits of 25 of the pioneers in immunotherapy are the culmination of two years of travel to laboratories, offices, and conferences around the world and countless hours of conversation with individuals immersed in a vitally important, promising assault on a dread disease that kills more than eight million people each year worldwide. -- from dust jacket.

Decision Making in Radiation Oncology is a reference book designed to enable radiation oncologists, including those in training, to make diagnostic and treatment decisions effectively and efficiently. The design is based on the belief that "a picture is worth a thousand words." Knowledge is conveyed through an illustrative approach using algorithms, schemas, graphics, and tables. Detailed guidelines are provided for multidisciplinary cancer management and radiation therapy techniques. In addition to the attention-riveting algorithms for diagnosis and treatment, strategies for the management of disease at individual stages are detailed for all the commonly diagnosed malignancies. Clinical trials that have yielded "gold standard" treatment and their results are documented in the schemas. Moreover, radiation techniques, including treatment planning and delivery, are presented in an illustrative way. This groundbreaking publication is an essential tool for physicians in their daily clinical practice.
