Few countries have integrated into the world economy as fast – or as dramatically – as China has since 1978. The world's most populous country is emerging as a world workshop and export machine: a visit to a department store in any country will unearth a plethora of goods manufactured in the People's Republic. China is now the world's fourth largest exporting nation. In this important book, Kevin Zhang brings together an international team of contributors to analyze this development process. Taking a thematic approach, the book covers: \* manufacturing exports and the world workshop \* foreign capital and china's industrial development \* challenges from the WTO and openness. This topical analysis will be an excellent resource for postgraduate students and researchers in the fields of Asian and Chinese studies, export studies, and economics. "The conference held to discuss initial versions of the chapters .. " -- p. vii. Professional technicians count on Chilton's, you can too! The nature of a company's supply chain has a significant effect on its success or failure--as in the success of Dell Computer's make-to-order system and the failure of General Motor's vertical integration during the 1998 United Auto Workers strike. Supply Chain Integration looks at this crucial component of business at a time when product design, manufacture, and delivery are changing radically and globally. This book explores the benefits of continuously improving the relationship between the firm, its suppliers, and its customers to ensure the highest added value. This book identifies the state-of-the-art developments that contribute to the success of vertical tiers of suppliers and relates these developments to the capabilities that small and medium-sized manufacturers must have to be viable participants in this system. Strategies for attaining these capabilities through manufacturing extension centers and other technical assistance providers at the national, state, and local level are suggested. This book identifies action steps for small and medium-sized manufacturers--the "seed corn" of business start-up and development--to improve supply chain management. The book examines supply chain models from consultant firms, universities, manufacturers, and associations. Topics include the roles of suppliers and other supply chain participants, the rise of outsourcing, the importance of information management, the natural tension between buyer and seller, sources of assistance to small and medium-sized firms, and a host of other issues. Supply Chain Integration will be of interest to industry policymakers, economists, researchers, business leaders, and forward-thinking executives. As the twenty-first century begins, significant changes are occurring in the way that services and goods are produced and consumed. One of the key drivers of this change is information and communications technology (ICT). It has transformed the role of space and time in patterns of economic development, in the rise of globalization and in the scale and structure of organizations. ICT has therefore accelerated the process of continual change and evolution that is the hallmark of both the capitalist economy and of organizations. Giving a student-friendly account of the diversity of theoretical perspectives, this outstanding book aids understanding the evolving economic geography of advanced capitalist economies. A series of detailed firm and employees' case studies from Europe, North America and the Asia Pacific, are used to inform useful theoretical case studies, which also investigate the significance of increased blurring of the lines between services and manufacturing functions in the production and consumption process. Bentley Publishers is the exclusive factory-

**Inhaltsangabe: Abstract:** This thesis resolves the need for an industry award for service excellence in retailing, based on a comprehensive framework to foster management quality. A service excellence framework is developed and the design for a new service excellence award is proposed. The proposed framework is based on the Industrial Excellence Award. In addition to the original four fundamental processes a fifth component is introduced: the customer. To complete the framework, the seven components of management quality known from the IEA are adopted. This framework is the structure for the self-assessment questionnaire that will be the core of the new Best Retailer service excellence award. Through an extensive literature review, success factors and empirically tested items for questionnaires were identified and assigned to the corresponding sections in the questionnaire. The result is a collection of questions that - if appropriately considered by management can help introducing service excellence in the retailing industry. The modus operandi of a possible future award competition is suggested to stay close the example of the IEA in order to leverage the existing brand. This should help to popularize the new award, to create outstanding showcases quickly, and to disseminate excellent management quality in the industry.

This book is dedicated to the issues and complexities of industrial services supply chain management. It analyzes how the transition from products to services can be managed, and how supply chains can be adjusted to reflect this new status quo. The book begins with chapters examining product-service systems structures and servitization – the services infusion process. Next, it presents industrial services as marketing and operations strategy. The focus shifts to service delivery, and this chapter discusses how the actual operations take place. This is followed by an examination of the role of technology and how connected assets are utilized by product vendors in value-creation. The book analyzes the transition from ownership to subscriptions in the pricing decisions chapter. Then the value chain effects chapter offers an overview of the mechanisms through which industrial companies are shortening the distance to end-users and aim for a better position in the value chain. Finally the conclusion addresses theoretical and empirical implications in the industrial services supply chain management.
