This book contains substantially extended and revised versions of the best papers from the 12th International Conference on Enterprise Information Systems (ICEIS 2010), held in Funchal, Madeira, Portugal, June 8-12, 2010. Two invited papers are presented together with 39 contributions, which were carefully reviewed and selected from 62 full papers presented at the conference (out of 448 submissions). They reflect state-of-the-art research work that is often driven by real-world applications, thus successfully relating the academic with the industrial community. The topics covered are: databases and information systems integration, artificial intelligence and decision support systems, information systems analysis and specification, software agents and internet computing, and human-computer interaction. TO COMPUTER GRAPHICS BASED ONGKS Part I gives an introduction to basic concepts of computer graphics and to the principles and concepts of GKS. The aims of this part are twofold: to provide the beginner with an overview of the terminology and concepts of computer graphics, based on GKS, and to give the computer graphics expert an introduction to the GKS standard. In the early chapters of this part, the main areas of computer graphics, the various classes of computer graphics users, the interfaces of GKS and its underlying design concepts are discussed and important terms are defined. The later chapters give an informal introduction to the main concepts of GKS and their interrelationships: output, attributes, coordinate systems, transformations, input, segments, metafile, state lists, and error handling. This introduction to the GKS framework will prepare the ground for the detailed description of 2D GKS functions in Part III and the 3D extensions to GKS in Part IV.

1. WHAT IS COMPUTER GRAPHICS? 1. 1. Definition of Computer Graphics The Data Processing Vocabulary of the International Organization for Standardization (ISO) [ISO 84] defines Computer Graphics as follows: "Methods and techniques for converting data to and from a graphic display via computer." This definition refers to three basic components of any computer graphics system - namely "data", "computer", and "display". The successor states of the former Soviet Union have enormous stocks of weapons-usable nuclear material and other militarily significant commodities and technologies. Preventing the flow of such items to countries of proliferation concern and to terrorist groups is a major objective of U.S. national security policy. This book reviews the effectiveness of two U.S. programs directed to this objective. These programs have supported the efforts of Russia, Ukraine, Belarus, and Kazakhstan in upgrading the physical protection, control, and accountability of highly enriched uranium and plutonium and strengthening systems to control the export of many types of militarily sensitive items. Offers psychological insights into how people perceive, respond to, value, and make decisions about the environment Environmental law may seem a strange space to seek insights from psychology. Psychology, after all, seeks to illuminate the interior of the human mind, while environmental law is fundamentally concerned with the exterior surroundings—the environment—in which people live. Yet psychology is a crucial, undervalued factor in how laws shape people's interactions with the environment. Psychology can offer environmental law a rich, empirically informed account of why, when, and how people act in ways that affect the environment—which can then be used to more effectively pursue specific policy goals. When environmental law fails to incorporate insights from psychology, it risks misunderstanding and mispredicting human behaviors that may injure or otherwise affect the environment, and misprescribing legal tools to shape or mitigate those behaviors. The Psychology of Environmental Law provides key insights regarding how psychology can inform, explain, and improve how environmental law operates. It offers concrete analyses of the theoretical and practical payoffs in pollution control, ecosystem management, and climate change law and policy when psychological insights are taken into account. A developer's knowledge of a computing system's requirements is necessarily imperfect because organizations change. Many requirements lie in the future and are unknowable at the time the system is designed and built. To avoid burdensome maintenance costs developers must therefore rely on a system's ability to change gracefully-its flexibility. Flex This book presents a detailed pedagogical description of the 5G commercial wireless communication system design, from an end to end perspective. It compares and contrasts NR with LTE, and gives a concise and highly accessible description of the key technologies in the 5G physical layer, radio access network layer protocols and procedures. This book also illustrates how the 5G core and EPC is integrated into the radio access network, how virtualization and edge computing fundamentally change the way users interact with the network, as well as 5G spectrum issues. This book is structured into six chapters. The first chapter reviews the use cases, requirements, and standardization organization and activities for 5G. These are 5G requirements and not NR specifically, as technology that meets the requirements, may be submitted to the ITU as 5G technology. This includes a set of Radio Access Technologies (RATs), consisting of NR and LTE; with each RAT meeting different aspects of the requirements. The second chapter describes the air interface of NR and LTE side by side. The basic aspects of LTE that NR builds upon are first described, followed by sections on the NR specific technologies, such as carrier/channel, spectrum/duplexing (including SUL), LTE/NR co-existence and new physical layer technologies (including waveform, Polar/LDPC codes, MIMO, and URLLC/mMTC). In all cases the enhancements made relative to LTE are made apparent. The third chapter contains descriptions of NR procedures (IAM/Beam Management/Power control/HARQ), protocols (CP/UP/mobility, including grant-free), and RAN architecture. The fourth chapter includes a detailed discussion related to end-to-end system architecture, and the 5G Core (5GC), network slicing, service continuity, relation to EPC, network virtualization, and edge computing. The fifth and major chapter describes the ITU submission and how NR and LTE meet the 5G requirements in significant detail, from the rapporteur responsible for leading the preparation and evaluation, as well as some field trial results. Engineers, computer scientists and professionals with a passing knowledge of 4G LTE and a comprehensive understanding of the end to end 5G commercial wireless system will find this book to be a valuable asset. Advanced-level students and researchers studying and working in communication engineering, who want to gain an understanding of the 5G system (as well as methodologies to evaluate features and technologies intended to supplement 5G) will also find this book to be a valuable resource. Edited by a professor at Harvard Medical School who has extensive experience in this field, this important and timely book presents a variety of perspectives on the organization of patient medical records around patient problems, presenting a more effective problem-oriented approach rather than the traditional data-oriented approach. It is comprehensive, covering the history and importance of the electronic health record, the attitudes toward and use of problem lists, strategies to improve the problem list, and applications in practice of the problem list. A guide to troubleshooting Microsoft network technology covers such topics as troubleshooting tools, client-server issues, disk failures, Office XP applications, DNS, WINS, and routing and remote access. This book constitutes the refereed proceedings of the 9th International Workshop on Security, IWSEC 2014, held in Hiroaki, Japan, in August 2014. The 13 regular papers presented together with 8 short papers in this volume were carefully reviewed and selected from 55 submissions. The focus of the workshop was on the following topics: system security, threshold cryptography, hardware security, foundation, and encryption. Too many of us feel trapped in stagnant romantic, family, or workplace relationships. Weighed down by toxic thoughts and emotions, we might be quick to judge and slow to pardon, and self-righteous about our feelings as we dwell on memories of what we or others did (or failed to do). In this new book, Iyanla Vanzant challenges us to liberate ourselves from the wounds of the past and to embrace the new power of forgiveness. With Iyanla's 21-Day Forgiveness Plan, you'll explore relationship dynamics with your parents, children, friends, partners, co-workers, bosses, yourself, and even God. With journaling work and Emotional Freedom Techniques (also known as "tapping"), you'll learn to live with more love; gain new clarity on your life, lessons, and blessings; and discover a new level of personal freedom, peace, and well-being. Forgiveness doesn't mean agreeing with, condoning, or even liking what has happened. Forgiveness means letting go and knowing that—regardless of how challenging, frightening, or difficult an experience may seem—everything is just as it needs to be in order for you to grow and learn. When you focus on how things "should" be, you deny the presence and power of love. Accept the events of the past, while being willing to change your perspective on them. As Iyanla says, "Only forgiveness can liberate minds and hearts once held captive by anger, bitterness, resentment, and fear. Forgiveness is a true path to freedom that can renew faith, build trust, and nourish the soul." This revised edition of The OCD Workbook contains new findings on the causes of OCD, including developments in genetic research. It offers information on treatment options like neurosurgery and new medications and a new chapter on day-to-day coping strategies for people with OCD. The new edition includes expanded coverage of related disorders like body dysmorphic disorder, trichotillomania, and skin picking. New information on relapse prevention, OCD in children, and family involvement in OCD round out this important book. Learn about the causes and symptoms of OCD Design a self-directed cognitive behavior treatment plan Build a strong base of family support Evaluate professional treatment options Maintain your progress and deal with setbacks "A unique and indispensable work that serves both as a basic introduction to the disarmament scene and a reference book for experts" - Disarmament Times "This compendium of the history and achievements of arms control and disarmament efforts is unique in its kind and is likely to remain so. This for three reasons: first, because of its unparalleled comprehensiveness; second, because of the outstanding quality of its presentation, and, third, because of its author, Jozef Goldblat, one of the world's leading experts in the field. This triad makes the updated Second Edition of Arms Control: The New Guide to Negotiations and Agreements a must for all concerned with international security in general and arms control in particular? - Curt Gasteyer, Graduate Institute of International Studies, Geneva "The thesaurus of arms regulation and disarmament...a precious tool for negotiators and treaty makers? - Ambassador V Petrovsky, Former Secretary-General of the Conference on Disarmament "Being the most comprehensive and authoritative compilation and analysis of arms control agreements available, this is an indispensable reference volume for students and practitioners of arms control and international security. The author has spent a lifetime in the study and practice of international security affairs: where international law and arms control agreements are concerned, there is no one better qualified than him? - Sverre Lodgaard, Norwegian Institute of International Affairs, Oslo The revised and updated edition of Arms Control: The New Guide to Negotiations and Agreements contains the most authoritative and comprehensive survey ever published of the documents related to arms control. All major agreements reached since the second half of the nineteenth century through to mid-2002 are critically analysed and assessed. The assessment is made in the light of the international security environment, the developments in the field of weapon technology, the threat of nuclear, chemical and biological weapons proliferation, and the efforts to strengthen the humanitarian law of armed conflict. The accompanying CD-ROM reproduces full text and carefully selected excerpts of treaties, conventions, common understandings, statutes, charters, binding decisions of international bodies, final acts of international conferences, exchanges of letters and diplomatic notes. Multilateral agreements are followed by a list of parties. Enriched with new maps, tables and figures, as well as an expanded glossary and bibliography, the book will remain the definitive resource for students of international relations, journalists, diplomats and military strategists. Jozef Goldblat, the author, is Vice-President of the Geneva International Peace Research Institute (GIPRI), Resident Senior Fellow of the UN Institute for Disarmament Research (UNIDIR) and Associate Editor of Security Dialogue, published by SAGE for the International Peace Research Institute, Oslo (PRIO). He has studied the problems of arms control since the 1950s and has been involved in arms control negotiations. From 1969 to 1989 he directed the arms control and disarmament programme of studies at the Stockholm International Peace Research Institute (SIPRI). He has lectured at various universities and has written reports, articles and books on the arms race and disarmament. His latest publications include The Nuclear Non-Proliferation Regime: Assessment and Prospects, The Hague Academy of International Law, 1997, and Nuclear Disarmament: Obstacles to Banishing the Bomb, I. B. Tauris, 2000. This book is a comprehensive presentation of entity-relationship (ER) modeling with regard to an integrated development and modeling of database applications. It comprehensively surveys the achievements of research in this field and deals with the ER model and its extensions. In addition, the book presents techniques for the translation of the ER model into classical database models and languages, such as relational, hierarchical, and network models and languages, as well as into object-oriented models. Treating Weapons Proliferation is a chilling exploration of the dynamics of weapons proliferation and nonproliferation. In an analogy with the disease of cancer, the book walks the reader through the history of the phenomenon with its growing complexities and changing dimensions. The International Atomic Energy Agency has had a leading responsibility in preventing the spread of nuclear weapons and misuse of materials intended for nuclear energy across the world. Originally published in 1987, in the wake of the Chernobyl disaster of 1986 which proved the utmost importance of the agency, Scheinman explores the function of the IAEA and the challenges it faced. This report also lists ways that the agency could be strengthened touching on topics such as leadership roles, support for safeguarding functions and prevention from the agency being overwhelmed by international and national political issues. This title will be of interest to students of Environmental Studies. Provides a variety of solutions for SharePoint problems, covering such topics as creating visual Web parts, customizing search, UI design and branding, building scalable applications, and creating custom global navigation solutions. This book presents the refereed proceedings of the 9th European Knowledge Acquisition Workshop, EKAW '96, held in Nottingham, UK, in May 1996. The 23 revised full papers included address the most relevant theoretical and applicational aspects of knowledge acquisition with a certain emphasis on the acquisition of knowledge for the modelling or automation of complex problem-solving behaviour. The volume is organized in sections on theoretical and general issues, eliciting knowledge from textual or other sources, data-mining, group elicitation, and planning. "The arrest and public confession of Pakistani nuclear weapons scientist Abdul Qadeer Khan in 2004 revealed the existence of a global proliferation network which had, over almost two decades, provided nuclear technology, expertise, and designs to Iran, North Korea, Libya and possibly other countries. Khan was not the only nuclear arms merchant and Pakistan was not the only country implicated in his shadowy network. It spanned three continents and eluded both national and international systems of export controls that had been designed to prevent illicit trade. The discovery of the network highlighted concerns that nuclear technology is no longer the monopoly of industrially advanced countries, but can be purchased off-the-shelf by both states and terrorist groups. The IISS Strategic Dossier on nuclear black markets provides a comprehensive assessment of the Pakistani nuclear programme from which the Khan network emerged, the network's onward proliferation activities, and the illicit trade in fissile materials. In addition, the Strategic Dossier provides an overview of the clandestine nuclear procurement activities of other states, along with the efforts made both by Pakistan and the international community to prevent the reoccurrence of further proliferation networks and to secure nuclear technology. The final chapter assesses policy options for further action. Track daily what makes you feel angry, and what do you do when you get angry. The papers are at once a record of what has been achieved and the first steps towards shaping the future of information systems. DEXA covers a broad field, and all aspects of database, knowledge base and related technologies and their applications are represented. Once again there were a good number of submissions: 241 papers were submitted and of these the programme committee selected 103 to be presented. DEXA '99 took place in Florence and was the tenth conference in the series, following events in Vienna, Berlin, Valencia, Prague, Athens, London, Zurich, Toulouse and Vienna. The decade has seen many developments in the areas covered by DEXA, developments in which DEXA has played its part. I would like to express thanks to all the institutions which have actively supported and made possible this conference, namely: • University of Florence, Italy • IDG CNR, Italy • FAW – University of Linz, Austria • Austrian Computer Society • DEXA Association In addition, we must thank all the people who have contributed their time and effort to make the conference possible. Special thanks go to Maria Schweikert (Technical University of Vienna), M. Neubauer and G. Wagner (FAW, University of Linz). We must also thank all the members of the programme committee, whose careful reviews are important to the quality of the conference. The English term "prayer" is usually understood as communication with God or the gods. Scholars of Jewish ritual until now have accepted this characterization and applied it to Jewish tefillah. Does rabbinic prayer indeed necessarily entail second-person address to God, as many scholars of rabbinic prayer to this point have presumed? In this work, Yehuda Septimus investigates a boundary phenomenon of talmudic prayer - ritual speech with addressees other than God. The book represents a fresh look at the possible range of performances undertaken by talmudic ritual prayer. Moreover, it places that range of performances into the historical context of the rapid emergence of prayer as the centerpiece of Jewish worship in the first half of the first millennium CE. China, Arms Control, and Non-Proliferation is an empirically and conceptually path-breaking book that documents China's participation in international arms control and non-proliferation regimes from 1985 to 2001. The book focuses on the distinction between US expectations of Chinese compliance, which China has not always met, and international standards, against which Chinese performance is acceptable. This will be the standard staple work dealing with China and international arms control and will be invaluable to those dealing with Chinese security studies, foreign policy, international relations and arms control and disarmament. The contributors to this book explore approaches to building a framework for nuclear governance in the Asia-Pacific – encompassing nuclear safety, security, and safeguards/non-proliferation. Nuclear governance collaboration offers an avenue for states in the Asia-Pacific to tackle the emerging opportunities for and challenges to the peaceful uses of nuclear energy and the civilian applications of nuclear and

radioactive materials. The nature of national actions, bilateral initiatives and regional cooperation in capacity building taking place in East Asia provides a good foundation to pursue a more robust collaborative framework for nuclear governance in the wider Asia-Pacific region. The contributors to this book explore the most critical nuclear safety, security and non-proliferation issues faced by states in the Asia-Pacific and the growing cooperation spearheaded by Southeast Asian countries, China, Japan, South Korea and the United States. This book is a valuable read for academics working on security and strategic studies, international relations, non-traditional security issues as well as nuclear-related issues. Is the appearance of new nuclear weapon states inevitable? Who are the sponsors and apologists of nuclear weapons, and why are others in favour of renouncing them? What are the implications for international security of the increasingly wide use of nuclear energy? How can nuclear threats be defused? Originally published in 1985, SIPRI's study suggests some answers to these questions. The book examines the situation in a number of countries of key importance for non-proliferation: the two nuclear-weapon states which have declined to join the 1968 Non-Proliferation Treaty (China and France); a group of nuclear 'threshold' states also remaining outside the Treaty (Argentina, Brazil, India, Israel, Pakistan, South Africa and Spain); and a group of states, both developed and developing, which for various reasons have joined the Treaty (Canada, Egypt, South Korea, Sweden, Switzerland and Taiwan). The focus of the book is on motivations for and against nuclear proliferation. An analysis of these motivations leads the editor to make detailed recommendations aimed at halting the spread of nuclear weapons. Appendices include a list of nuclear facilities in the countries studied, specifying the degree of their coverage by international controls, and other relevant documentation.
